

## MODULE 7: SUBMIT

# From Research Insights to Community Impact:

## A DISSEMINATION TOOLKIT FOR COMMUNITY-ENGAGED RESEARCH TEAMS

## MODULE 7: SUBMIT

This module may be of special interest to those representing:

**Team Leads**

This module is part of a larger resource,  
“From Research Insights to Community  
Impact: A Dissemination Toolkit for  
Community-Engaged Research Teams.”

Scan the QR code  
to access the full toolkit.

An asterisk (\*) indicates a link to an external, nonfederal site. CETAC cannot guarantee the accuracy of external sites or their resources. Linking to a nonfederal site does not imply endorsement by NIH, CETAC, or their employees of the site’s sponsors, information, or products. Although we adhere to Section 508 accessibility regulations, we are not responsible for the accessibility compliance of external federal or private websites.

## MODULE 7: SUBMIT

*Module 7 considers what your writing team can do once you submit your dissemination product to your chosen venue.*

### Submit and Move Forward

Before submitting, make sure you read the submission requirements. Common submission requirements:

- Names, credentials, author biographies, and contact information are accurate.
- Photos included are high-resolution.
- References are cited in the publication venue's preferred citation style.

After you submit, there are many things you can do to move forward in your research.

## Moving Forward After Submitting a Dissemination Product

Pause and rest. You just submitted a dissemination product! Congratulations!

Think of the different ways you can share the story and message of the submitted dissemination product. If your submission gets rejected, list other publication venues for submission. If it gets accepted, you can still think of the different ways to tell your research story that expand your writing team's ability to reach different audiences through different publication venues.

Think about other products you and your writing team are working on. Are there opportunities to start identifying a focus and determining a format?

If you have time and energy, you could serve as a manuscript reviewer for a publication venue. The purpose is to better understand the publication process, notice trends in current research, and identify potential collaborators for future dissemination products.

## ABOUT CEACR:

The Community Engagement Alliance Consultative Resource (CEACR) serves as a channel for community-engaged best practices to research teams wanting to apply principles of community-engaged approaches to address differences in health outcomes and encourage participation in research programs. For more information, please visit [nihceal.org](https://nihceal.org).

### We Value Your Feedback!

Please scan this QR code\* to tell us your initial thoughts about the toolkit.
